

Sustainability at Krones

Environmental, Social, Governance

 KRONES

Sustainability as part of our corporate strategy

Our Vision

Sustainable and affordable beverages, food and essentials for everyone and everywhere.

We develop solutions beyond expectations for our customers, humanity and our planet.

Our Mission

We lead with innovative solutions to empower our customers, meeting their goals and beyond, making them successful and sustainable.

We enforce our creative power to preserve nature and safeguard society.

Why we take responsibility

Solutions beyond tomorrow

Our vision for "**Solutions beyond tomorrow**"
puts sustainability at the centre of all our activities.

Our **solutions** are intended to make a significant contribution to three
major **challenges** facing **humanity**:

Curbing climate change (1.5 °C target)

Using packaging materials responsibly

Feeding the world's population

What we are working towards

Sustainability goals 2030

Upstream chain

-30 %	Reducing Scope 3 emissions in upstream processes
100 %	Suppliers managed with regard to human rights

Own operations

-80 %	Reducing Scope 1+2 emissions at our plants
-10 %	Reducing water and hazardous waste in our operations
20 %	Women in leadership
-30 %	Reducing occupational accidents in relation to hours worked
100 %	Legal entities evaluated with compliance risk analyses
85 %	Implementing ISO 27001 for important entities

Downstream chain

-30 %	Reducing Scope 3 emissions for the sold products
-25 %	Reducing energy footprint of sold products
-20 %	Reducing water footprint of sold products
30 %	of Krones lines' plastics output recycled with Krones technology (equivalent)

Until 2040

NET-ZERO

Emissions along
the entire value chain

12 KPIs in ESG (Environmental, Social, Governance) for directing sustainability along the value chain until 2030

Curbing climate change

(1.5 °C target)

What we are working towards

Curbing climate change

By 2040 Krones aims to:

Cut 90 percent of greenhouse gas emissions

Neutralise the remaining 10 percent

- Includes emissions from the entire value chain (Scope 1 to Scope 3)
- 2019 as the base year for achieving this goal

In addition to the medium-term reduction goals for 2030, the entire Krones Executive Board adopted a **net zero emissions target** in April 2024.

This is based on the standard defined by the Science Based Targets initiative (SBTi).

How we are bringing more sustainability to the industry

enviro solutions

Our program for sustainable products

Start:

2008 as a certified management system

Since then:

Expansion to the entire Krones product portfolio

Basis:

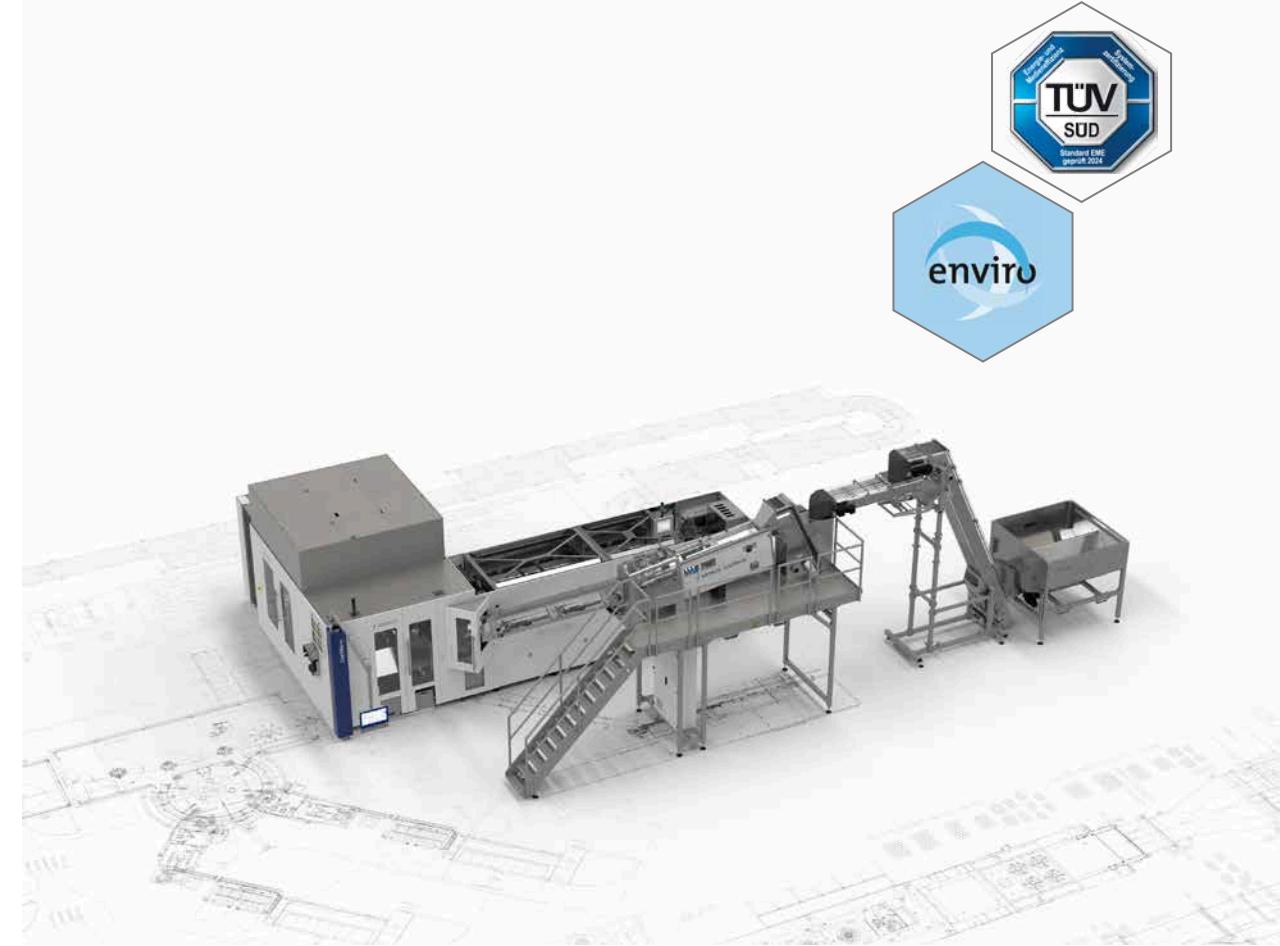

EME-Standard from TÜV SÜD (EME = Energy and Media Efficiency)

Validation:

External certification from TÜV SÜD

Outcome:

Machines and systems for proven energy- and media-efficient production, recognisable by the blue **enviro seal**

Where and how energy can be saved

Optimising processes, using synergy effects

Thermal energy

- Adjusting temperatures (e.g., warm filling)
- Using hot water instead of steam
- Hot or cold-water storage tanks in combination with heat pump or solar thermal energy
- Using waste heat from blow moulder, high pressure and / or low pressure air compressors and shrinking tunnels
- Central cooling system (incl. blow moulders)

Electrical energy

- Avoiding peak loads
- Generating renewable energy
- Energy efficient cooling of control cabinets
- Synchronous-reluctance drives for pumps (better energy efficiency compared to asynchronous drives, fewer materials and fewer rare minerals)
- Higher OEE results in less consumption per container, less waste, less stoppages

Using packaging materials responsibly

How packaging material can be used responsibly

Solutions for packaging

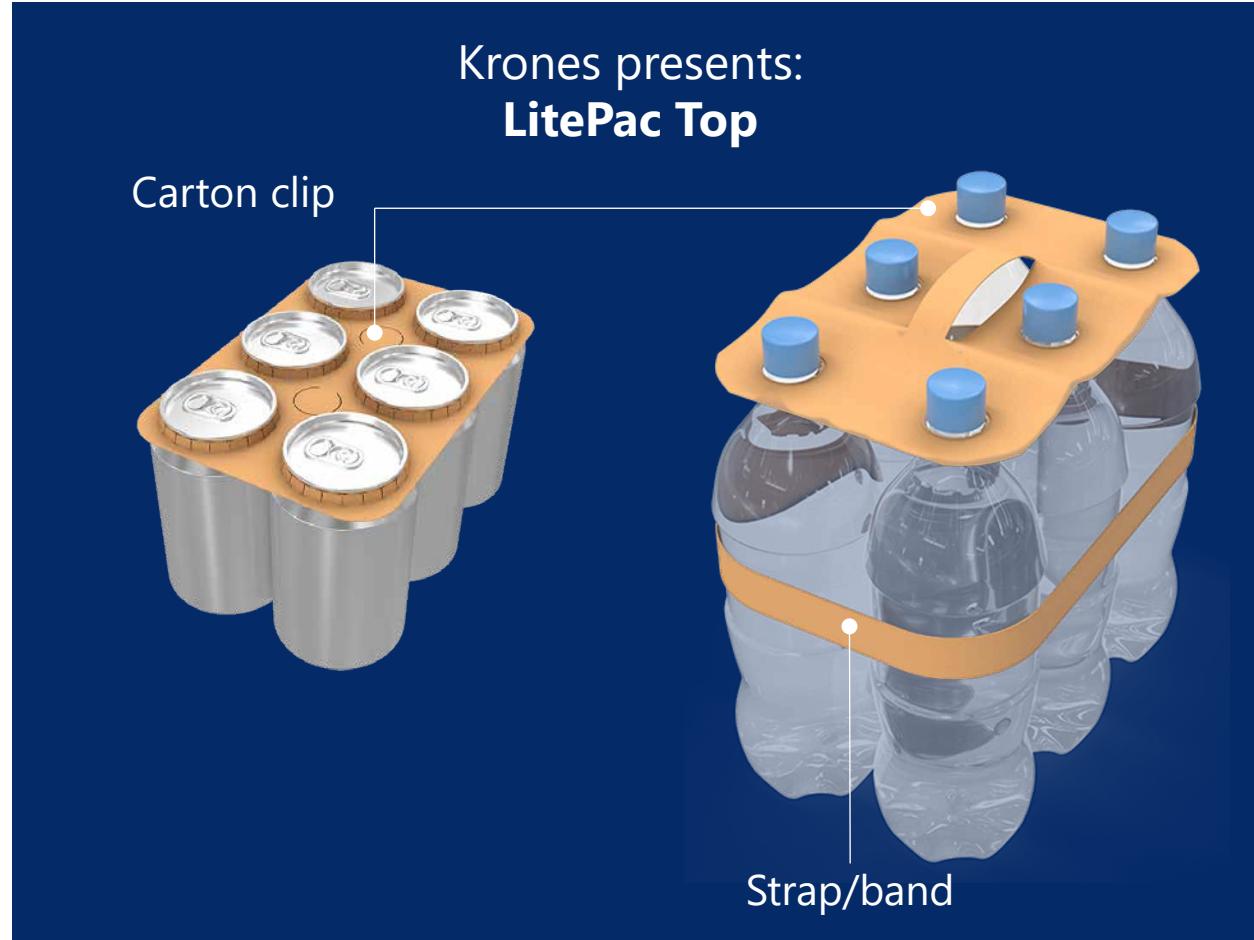

enviro program for sustainable packaging

- The enviro design also stands for environmentally friendly packaging.
- The enviro design considers all the environmental impacts of packaging according to the Circular Economy guidelines.

Further Solutions

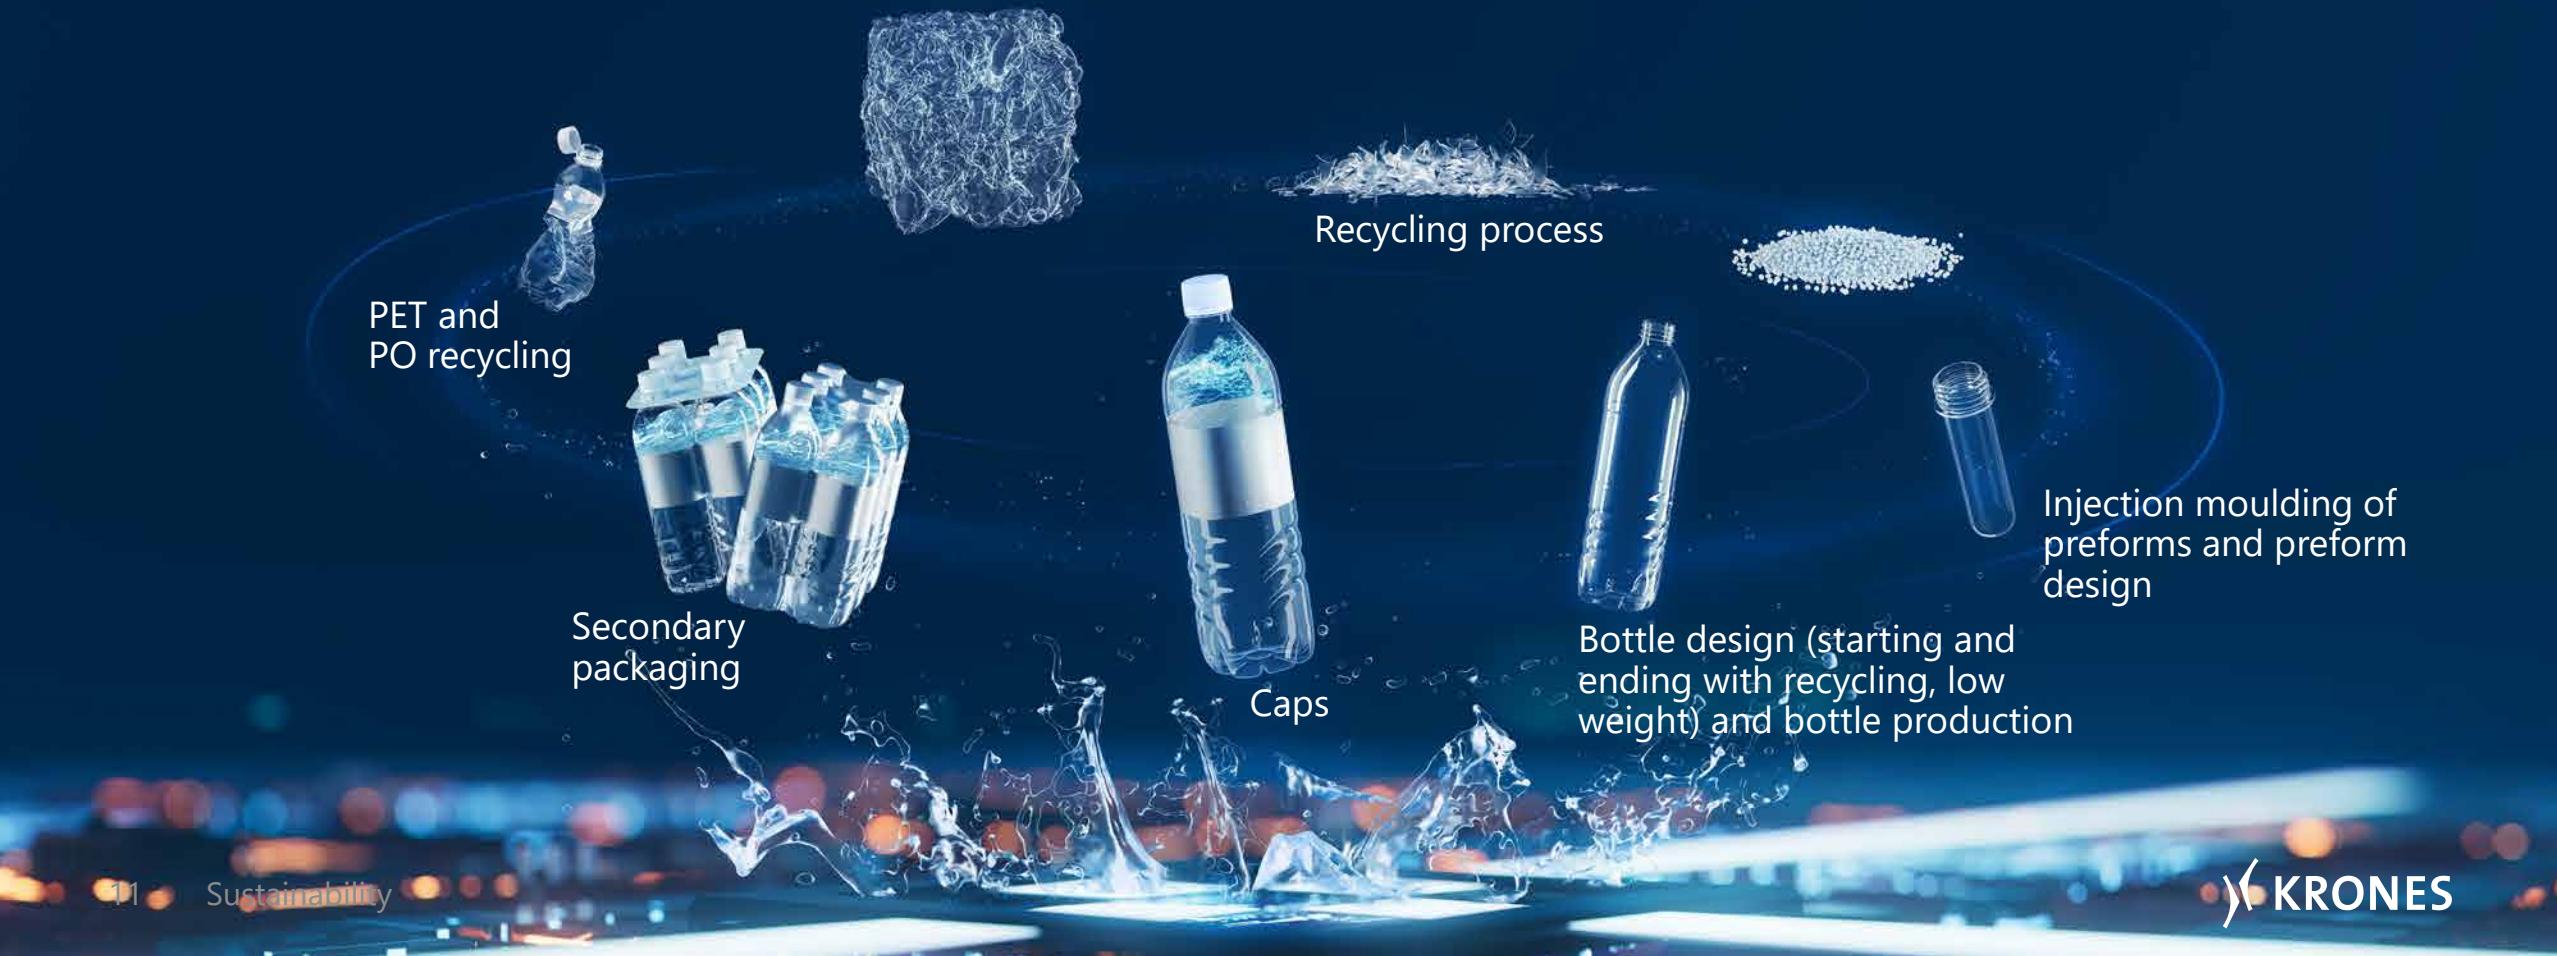

- Consulting: Environmental footprint of packaging depending on what best meets the customer's needs
- Use of recycled material
- Lightweighting

A closed plastics cycle

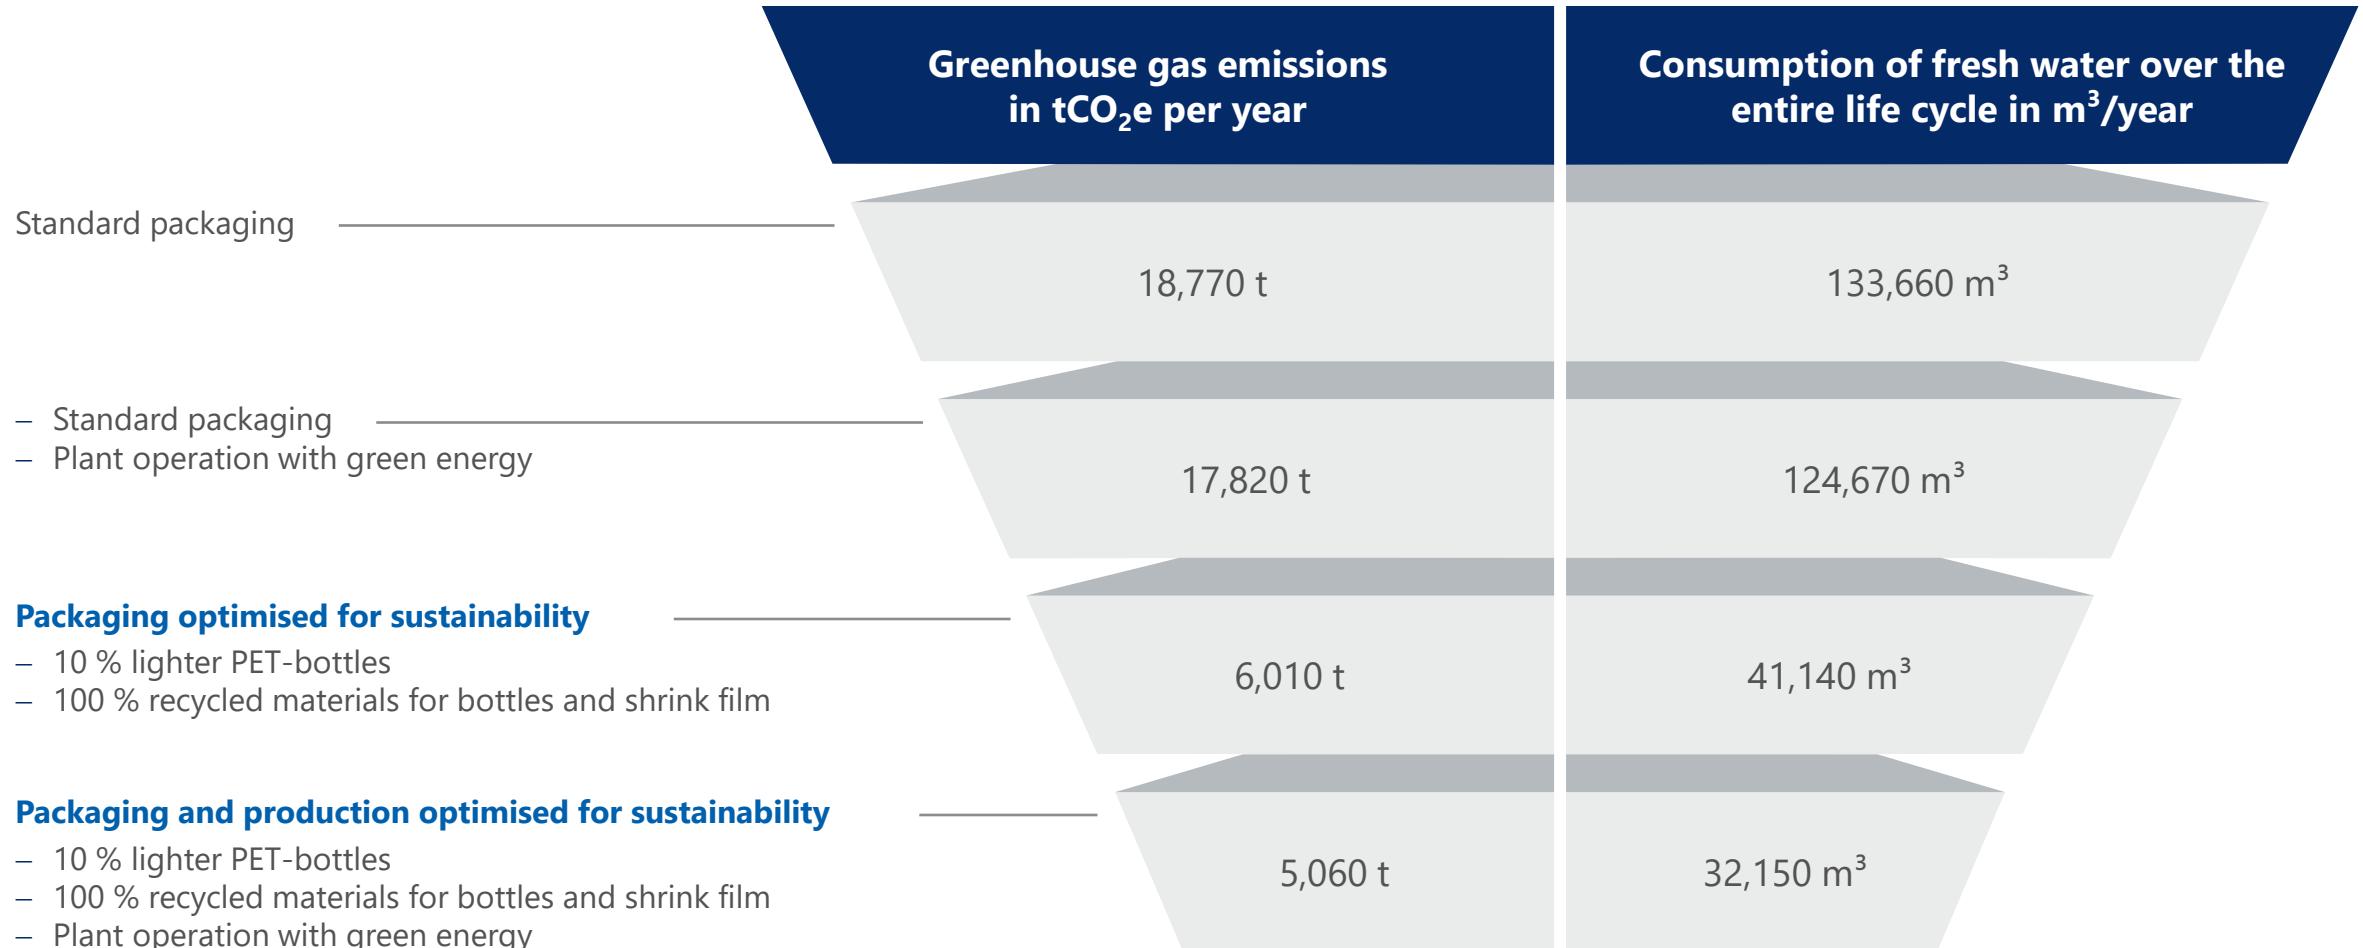

Form a single source - With the injection moulding machine, we close the PET plastic cycle with Krones solutions and enable in-house manufacturing for the customer.

Why investing in product sustainability pays off

Consumption in comparison

Feeding the world's population

How to feed the world's population

Solutions to save water

enviro program to save water

- enviro not only stands for energy efficiency, but also for media efficiency, for example with water.

Further solutions

Examples on the line level:

- Reusing rinsing water
- Vacuum pump: Dry running, no water needed
- Reasonable production planning
- Specifying cleaning requirements
- Dry lubrication for conveyors
- Warm filling: Less water and energy for cooling

How to feed the world's population

Solutions to counter food waste

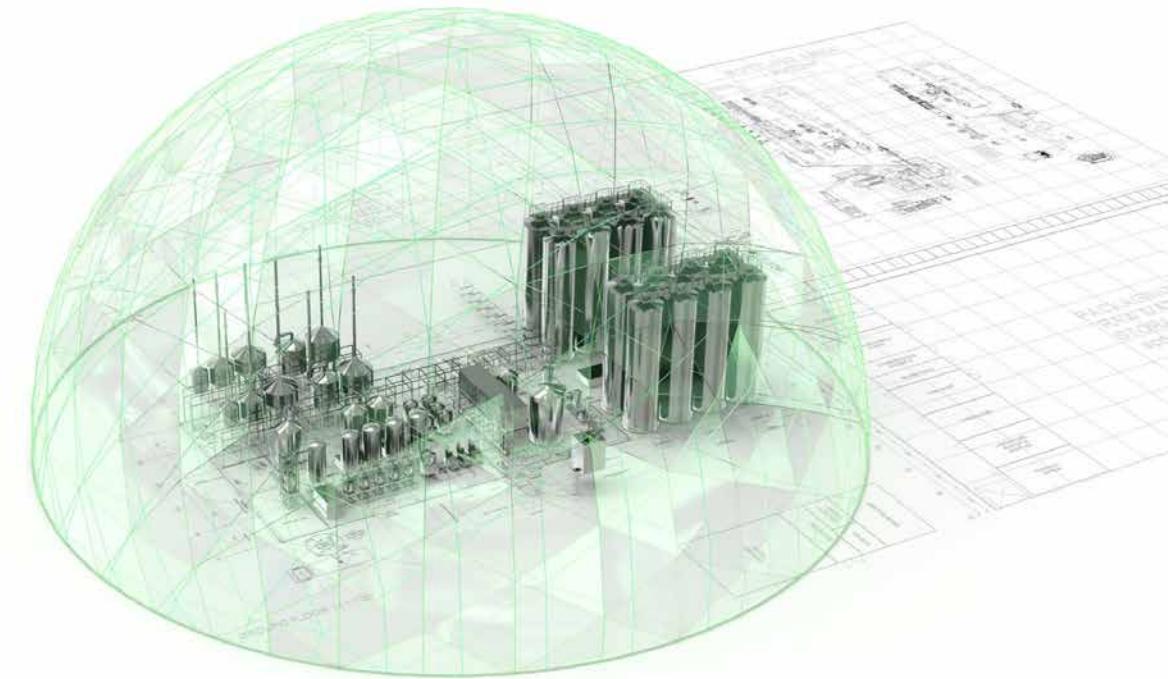

Brewnomic

- Reusing energy from residual materials from the brewing process to produce biogas
- Closing the gap between the current energy consumption of a modern brewery and the potential of recycling residual materials and materials and natural energy sources

Biomass conversion with Phoenix BMC

- With Phoenix BMC: → Expanded emissions reduction target to zero-waste production
- Converting biomass to upcycle material (protein base, fertilizer) and recover energy (biogas) from brewery residues

How to feed the world's population

Alternative sources of protein

Plant-based proteins

Complete process technology from Krones for the production of alternative proteins.

Advanced fermentation

Cruelty-free New Food Products with Krones fermentation technologies.

Plant-based milk alternatives

Turn-key facilities for plant-based milk alternatives from nut, legumes or grains.

All solutions
at a glance

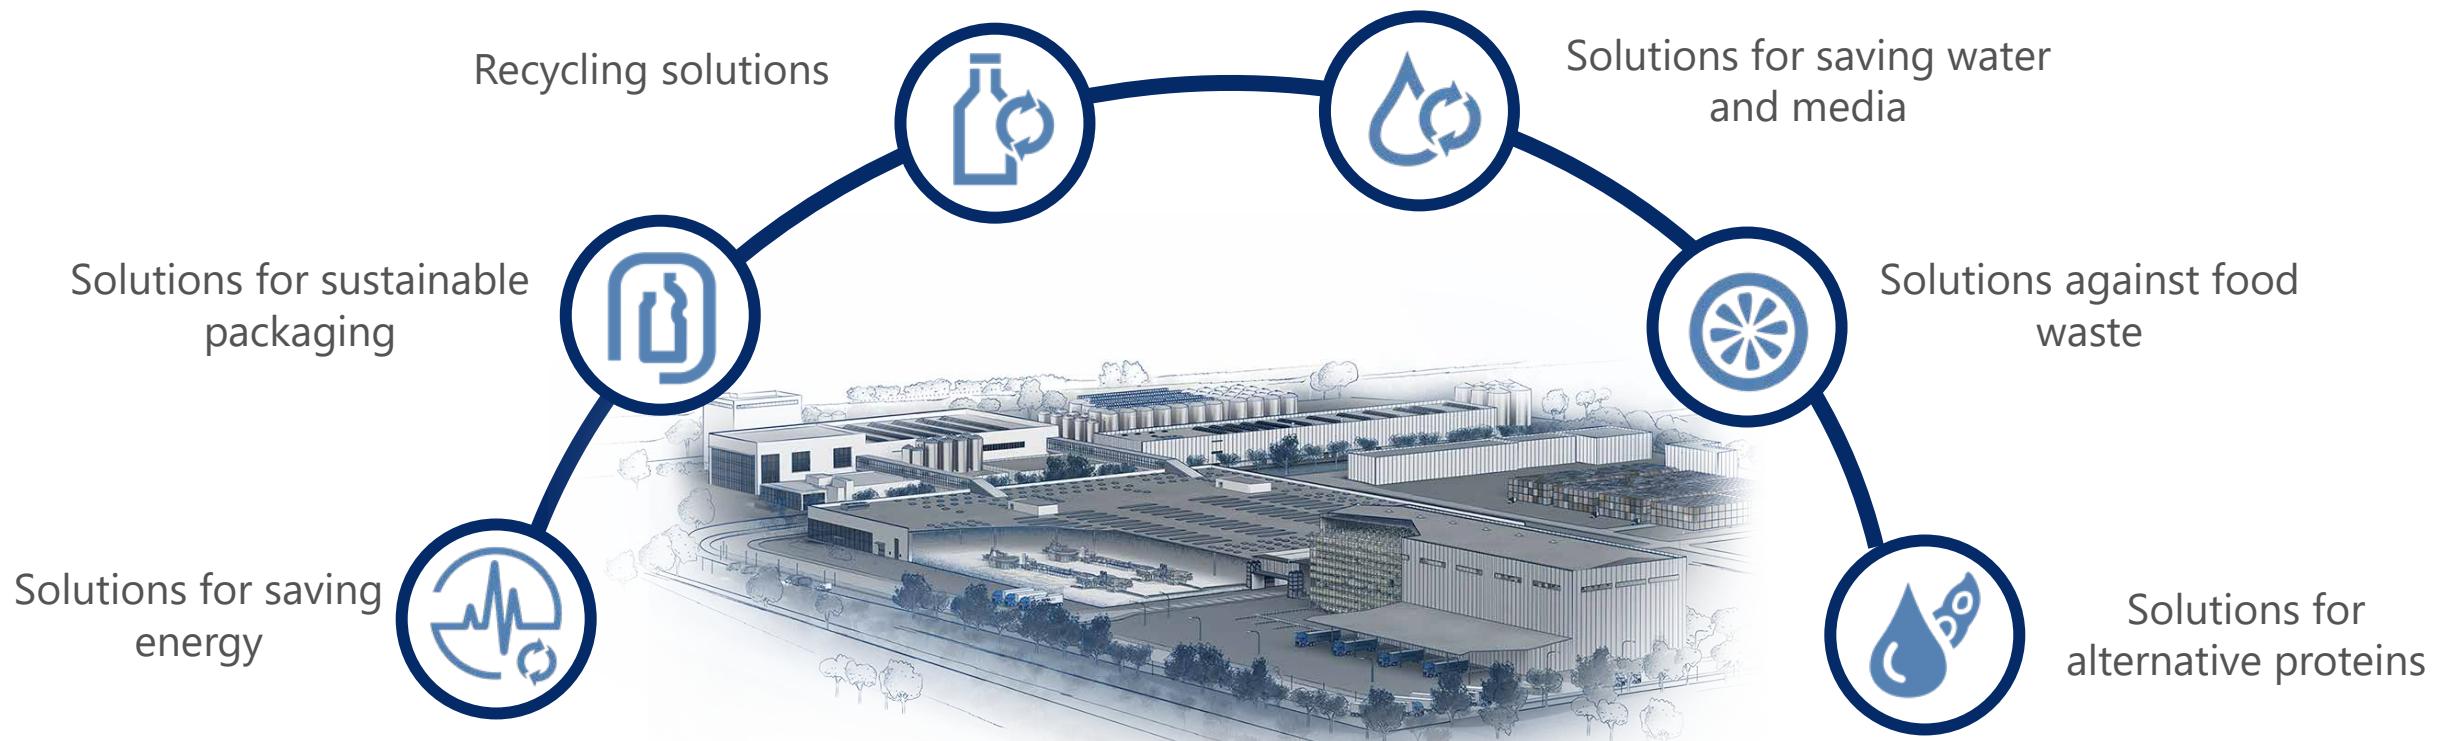

Optimising the entire system with Krones

Krones holistic approach

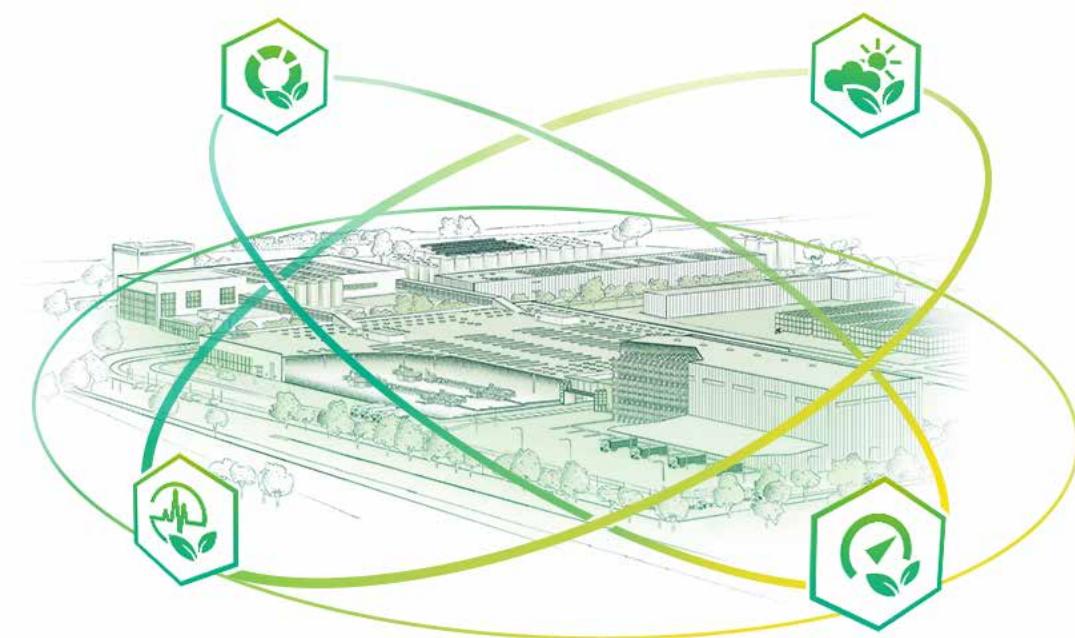

Krones can offer a variety of sustainable solutions at different levels:

Machine, line or plant level

Optimising the entire system with Krones

Resource efficiency at factory level through sustainability consulting

Energy solutions

Energy storage unit

- Hot and cold water storage
- Batteries and H2-storage

Procuring green energy

Self-generated thermal and electrical energy:

- Photovoltaics
- Solar heating
- Biomass
- Heat pump
- Wind turbines
- Combined heat and power plant

Water solutions

- Waste water concept
- Water treatment
- Water saving concepts

Digitalization

Digital solutions enable us to track the environmental performance of our customers' systems.

Social & Governance

How we assume our responsibilities

Social issues

Key topics

- **Diversity:** Promoting diversity and inclusion through targeted programs and a company-wide Diversity Board
15.7 % women in management positions (goal: 20 % by 2030)
- **Training and Development:** Employee appraisals, needs-based qualification and further training programs, training, Profile 21
- **Health and Safety:** ISO 45001 certifications, "Shaping healthy work habits", campaigns for physical and mental well-being
-28% reduction in work accidents (goal: 30 % by 2030)
- **Appropriate working conditions:** New Work concepts, flexible working hours, mobile working

How we assume our responsibilities

Social issues

As an international **company**, Krones is **committed** to **respecting human rights** as well as **labour** and **human rights related environmental standards** along the entire **value chain**.

Risk analysis

Risk analysis in our own business areas and along the supply chain

Preventative measures

- Own business unit: audits and risk analysis, certifications, training, code of conduct, guidelines
- Suppliers: social audits, due diligence, supplier evaluation, code of conduct for suppliers

Corrective measures

In the event of critical findings, the corrective measures to be taken are decided on a case-by-case basis. Depending on the severity, frequency and type of violation, the next steps are determined based on an in-depth investigation.

How we assume our responsibilities

Governance

Compliance along the value chain

- Anti-corruption program consisting of guidelines, training and prevention measures
- Fraud prevention through implemented due diligence processes
- Avoiding conflicts of interest
- Krones Integrity whistleblower system: Publicly accessible online system for reporting compliance risks

Dealing with knowledge and information

- ISO 27001 certification of our Krones Information Security Management System
- Maintaining information security for internal data and systems as well as for products and services
- Security Operation Center (SOC) as an active IT security service provider (24/7 monitoring)

Sustainability performance

How our performance is rated

Current rating results

EcoVadis 2024

Rating-Focus

- Environment
- Labor and human rights:
- Ethics
- Sustainable procurement

CDP 2023

Rating-Focus

Transparency in the disclosure of information and performance in relation to climate change, deforestation or water security

Climate change Water security

How our performance is rated

EU-Taxonomy

EU-taxonomy

- **EU-wide system** for classifying sustainable economic activities
- Part of the "**Action Plan on Financing Sustainable Growth**"
- **Objective:** To channel financial capital from banks and investors into sustainable companies

Turnover

Taxonomy-eligible activities (Potentially sustainable)	15.5 % 731.1 Mio. €	22.6 % 52.5 Mio. €	3.0 % 4.0 Mio. €
Taxonomy-aligned activities (sustainable according to the EU-taxonomy)	15.2 % 718.3 Mio. €	22.6 % 52.5 Mio. €	2.1 % 2.8 Mio. €
Activities considered:		enviro Portfolio, ecomac (sale of used machines), sale of spare parts	Individual measures: Photovoltaics, energy-efficient measures, charging stations for electric vehicles

98 percent of taxonomy-eligible activities are taxonomy-aligned.

CapEx

Activities considered:	enviro Portfolio, ecomac (sale of used machines), sale of spare parts	Individual measures: Photovoltaics, energy-efficient measures, charging stations for electric vehicles	Research & Development activities, maintenance
Of the revenue that could be sustainable (eligible), a very high percentage is actually sustainable (aligned) according to the EU-taxonomy criteria.			

Of the revenue that could be sustainable (eligible), a very high percentage is actually sustainable (aligned) according to the EU-taxonomy criteria.
